

Dura Loc

A high performance, value added product designed for dirt road dust control and road stabilization.

Dura-Loc is a high performance, value added product designed for dirt road dust control and road stabilization. Dura-Loc is environmentally friendly and very affordable.

- It can be applied very easily. Sprayed out of a computerized application truck it will penetrate and extend down into the soil to create a tough layer of protection.
- Dura-Loc binds fine dust and aggregate particles to keep surfaces stable and dust free. This hard surface is flexible, will shed water and can even easily withstand the demands of heavy vehicle traffic. This makes Dura-Loc the perfect cost-effective treatment for many dirt road applications.

Dura-Loc is a naturally occurring organic polymer combined with a propriety polymer.

Dura-Loc is an enhanced product that reduces product migration during the curing stage and improves wear surface durability. Dura-Loc binds the fine particles found in aggregate and natural soils preventing them from breaking out and creating fugitive dust. Dura-Loc locks these particles to larger aggregate and natural soils preventing movement which aids in stabilization and helps prevent the formation of wash boards and potholes. Over time, solar reactivity will harden Dura-Loc which greatly reduces solubility and product migration.

"Providing **SAFE** and affordable solutions since 1990"

AREAS OF USE

- Construction Sites
- Trails
- Landing Pads
- Orchards
- Any Unpaved Surface
- Tank Trails
- Camp Ground Access
- Air Fields
- Coal Stockpile Capping
- Feed Lots
- Vineyards
- Recycled Asphalt Applications
- Heavy Haul Roads
- Parking Lots
- Chip Seal Prep

BENEFITS

- Improved public relations.
- Non-Toxic / not harmful to humans, animals or plants.
- Can be custom blended for specific soil or climate conditions.
- Environmentally friendly.
- Reduces dust to PM10 standards.
- Improves travel safety.
- Does not require road closure.
- Works well in most soil types.
- Higher residual reduces reapplication rates.
- When cured, will not leach like chlorides.

ROAD PREPARATION

For dust control, Dura-Loc is applied to the surface. It is recommended that the surface be free of potholes and washboards. To aid in penetration, the road should be pre-wetted to optimum moisture content. Application rates will vary from .3 gallons to .5 gallons per square yard. For stabilization, consult with our staff and they will provide a recommendation. A soils analysis may be necessary to insure the very best results. Consult with our sales staff for application rates and procedures.

WHY SHOULD I CONSIDER DESERT MOUNTAIN CORPORATION AND DURA-LOC?

Desert Mountain Corporation is a leader in the Dust and Erosion Control Industry. Since 1990 Desert Mountain Corporation has been involved in the development of its varied products with regard to the environment, customer needs and product performance.

Dura-Loc is a product that has been tested and are proven to be a superior product in the defense against fugitive dust which has been associated with airborne dust illnesses.
